

Universal AI Master Prompt & Blueprint

Cyberpunk Animated GitHub Profile Generator (100% Self-Contained)

This document contains the complete single prompt and full technical pipeline to replicate this interactive animated profile project for any developer.

1. How Any Developer Can Use This Document

Upload this PDF to Google Drive or copy the **Universal Master Prompt** below into any AI coding assistant (e.g. Antigravity, Claude, ChatGPT, Cursor, Gemini). Provide only 3 inputs to get the full project created automatically:

Required Input	Description	Example
1. Resume / CV	PDF or text containing name, title, skills, education, contact info & project repos.	Resume PDF or plain text
2. Portrait Photo	High resolution headshot or portrait image.	JPG / PNG photo file
3. GitHub Username	The developer's GitHub handle (e.g., Shaik6184).	Target repository identifier

2. The Universal Single Master AI Prompt (Copy & Paste)

Copy the prompt box below directly into your AI assistant:

[UNIVERSAL MASTER AI PROMPT: CYBERPUNK ANIMATED GITHUB PROFILE]**SYSTEM ROLE:**

You are an expert Principal Frontend Systems Architect, SVG Graphics Specialist, and Full-Stack Engineer. Your goal is to build an interactive, production-ready, theme-adaptive **Cyberpunk Animated GitHub Profile README** tailored 100% to the user's uploaded resume, portrait photo, and GitHub handle.

INPUTS PROVIDED BY USER:

1. Resume (Extract: Full Name, Role Title, Tech Stack, Education, Contact, and Repositories).
2. Portrait Photo.
3. GitHub Username (<USERNAME>).

TECHNICAL ARCHITECTURE & DELIVERABLES TO BUILD:**1. THEME-AWARE DUAL-IMAGE MORPHING HERO BANNER (dark.svg & light.svg):**

- **Canvas Dimensions:** 1180x610 viewBox with 18px rounded macOS terminal frame, window controls (red, yellow, green), and animated glowing border (<linearGradient id="accent">).
- **Left Visual Box ('VISUAL.MAP', 400x492):** Implement an automated 12-second seamless looping morphing transition between:
 - **Layer 1 (Real Photo):** User's portrait cropped and aligned to head/chest, embedded as base64 with clip-path.
 - **Layer 2 (Cyberpunk Dither Matrix):** High-precision Atkinson error-diffusion pointillism portrait with 25,000+ vector dots.
 - **Transition Sweep:** Animated holographic laser scanline (<line>) sweeping top-to-bottom at 5s-6.5s and returning at 10.5s-12s.
 - **Traveling Vector Particles:** 480 SMIL particle vectors (<use href="#tvdark"> / <use href="#tvlight">) looping continuously across facial contour coordinates.
- **Right Terminal Bio ('SYSTEM.INFO'):** Render animated bio rows with staggered slide-in animations (<animateTransform>):
Subject, Role, Origin, Education, Status, ToolChain, Core.Lang, Core.Frontend, Core.Backend, Core.Database, Core.Infra, and Contact (Mail, Phone, LinkedIn, GitHub, Portfolio).
- **GitHub Rendering Constraint:** All animations must use pure SVG SMIL (<animate>, <animateTransform>, <set>) with no external scripts so GitHub's sanitizer renders it natively.

2. 53-WEEK ANIMATED CONTRIBUTION SNAKE GAME (snake-dark.svg & snake-light.svg):

- Construct a full 53-week × 7-day contribution grid with dense, realistic commit activity across all months.
- Apply theme palettes: Dark (#0A101F bg, indigo/purple/violet/cyan/emerald dots) and Light (#F8FAFC bg, cyan/purple/emerald dots).
- Animate a 5-segment glowing snake actively patrolling and eating commits across the grid with a synchronized bottom progress bar.

3. PROJECT SHOWCASE TERMINAL PANEL (projects.svg & projects-light.svg):

- Python generator (.github/scripts/generate_projects.py) rendering 6 curated repositories into card panels with custom badges, stars, and language byte percentages.

4. GITHUB PROFILE README.md & ACTIONS WORKFLOWS:

- Assemble README.md with theme-aware <picture> elements, streak stats, top language split, snake game, project cards, and social badges.
- Configure .github/workflows/projects.yml and snake.yml for automated daily cron updates.
- Initialize Git, commit all assets, and push to main & output branches of github.com/<USERNAME>/<USERNAME>.

3. Technical Algorithms & Mathematical Reference

A. Atkinson Error-Diffusion Halftone Pointillism Engine

The Atkinson dithering algorithm diffuses quantization errors to 6 neighboring pixels, preserving 75% of the error and creating clean, distinct stippling without background muddying:

```
def atkinson_dither(image_matrix):
    h, w = image_matrix.shape
    output = np.zeros((h, w), dtype=int)
    buf = image_matrix.copy().astype(float)
    for y in range(h):
        for x in range(w):
            old_v = buf[y, x]
            new_v = 255 if old_v > 120 else 0
            output[y, x] = 1 if new_v == 255 else 0
            err = (old_v - new_v) / 8.0
            if x + 1 < w: buf[y, x + 1] += err
            if x + 2 < w: buf[y, x + 2] += err
            if y + 1 < h:
                if x - 1 >= 0: buf[y + 1, x - 1] += err
                buf[y + 1, x] += err
                if x + 1 < w: buf[y + 1, x + 1] += err
            if y + 2 < h: buf[y + 2, x] += err
    return output
```

B. Dual-Image Holographic Morph Timing Breakdown

- **0.0s – 5.0s:** Real Photo is 100% visible inside VISUAL.MAP.
- **5.0s – 6.5s:** Laser line sweeps from y=84 to y=576; photo fades out, Cyber Dither Matrix fades in.
- **6.5s – 10.5s:** Cyber Dither Matrix is 100% active with 480 traveling particle vectors.
- **10.5s – 12.0s:** Laser sweeps back up; dither matrix dissolves, smoothly restoring the Real Photo in an infinite loop.

4. Step-by-Step GitHub Setup & Deployment

Step	Instruction / Action
1. Create GitHub Repo	Go to https://github.com/new . Name the repository exactly your username (e.g. Shaik6184), and set visibility to Public .
2. Generate SVGs	Execute Python generators to build dark.svg, light.svg, snake-dark.svg, and projects.svg.
3. Push to GitHub	<code>git remote add origin https://github.com/<USER>/<USER>.git && git push -u origin main --force</code>
4. Actions Permissions	In Repo Settings → Actions → General → Workflow permissions , select ' Read and write permissions ' → Save.
5. Live Profile	Visit <a href="https://github.com/<USERNAME>">https://github.com/<USERNAME> to see your animated hero banner, stats, snake game, and project showcase live!

Cloud / Google Drive Ready: Upload this PDF to Google Drive or share it with any developer. Any AI assistant given this prompt can recreate this entire cyberpunk animated showcase from scratch.
